

Product information

Flat screen packaging

The romwell TFT/LCD packaging combines outstanding characteristics:

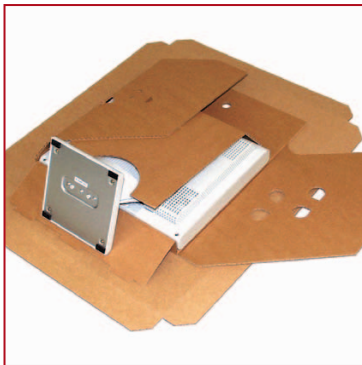

This pure corrugated cardboard solution adapts to different screen sizes and shapes, from 14" to 19" screens, but always retains the same exterior dimensions. The system is fast and guarantees maximum safety. It is therefore particularly suitable for the service sector.

The interior packaging is comprised of a floating base and a securing format. An optional enclosure may also be used.

The packaging is UPS-certified.

Flat screen packaging

Usage: TFT/LCD monitor packaging

The contact edge in the floating base is raised and engages. The monitor is placed on this edge. The top and side tabs are successively folded around the monitor. The tabs wrap snugly around the monitor housing.

With the supporting tabs facing down, the unit is now placed into the box.

The securing format is finally pressed onto the rear of the monitor, with its supporting wings pointing up, and the box can be sealed. The monitor is now held absolutely securely in position in the box and is protected.

14" to 19" TFT/LCD monitors

TFT/LCD packaging characteristics

- Reusable (service packaging)
- Reliable transportation protection
- Adapts to the size of the unit
- Pure paper solution
- Simple to handle
- Packaging time significantly less than 60 seconds
- Inexpensive
- Low transportation volume
- Certification (UPS, PaConsult)

Individual design

- Problem-specific development
- 21" version
- Printing
